Using this guide. Sections 1 to 4 cover the basics. Sections 5 to 9 cover teams, the gate, missions and combat. Sections 10 to 15 cover factions, support services and upgrades. Section 16 covers the minigames. Section 17 is the quick reference.

SECTION 01

Overview and Objective

Stargate Command is a base management game. You run a secret Earth installation that dials off-world through a stargate, sends teams to explore and fight on alien planets, and brings back supplies, research and technology. Every decision is made from the Cheyenne Mountain facility and every return passes through the gate.

The campaign is organised into five star systems, one per level. Each system holds a set of worlds, some of which are Goa'uld strongholds. Your progress through the campaign is measured by which strongholds you capture.

CORE LOOP

- **Dial** a destination from the Gate Room, paying power for each activation.
- **Send** a mission (exploration, survey, assault, assist, rescue or diplomacy) with teams, vehicles and a MALP.
- **Return** through the gate with supplies, naquadah, research, intel or casualties.
- **Spend** those resources on raising teams, healing, research projects and facility upgrades.

WINNING THE LEVEL

A level is cleared when every stronghold in its system has been captured. Capturing the last stronghold of a level unlocks the next system, adds its worlds to the starmap and raises the team limit by one per type. Capturing it also raises a **LEVEL SECURED** banner on the starmap, naming the next system, until you acknowledge it. The final stronghold of a level stays locked until 75% of the system's regular (non-stronghold) worlds, rounded down, have been explored: 3 of 4 at Level 1, 3 of 5 at Level 2, 1 of 2 at Level 3, 3 of 4 at Level 4 and 4 of 6 at Level 5.

STARTING POSITION

SUPPLIES	60
POWER	80 (capped at 120)
NAQUADAH	0
RESEARCH	0
TEAMS	Two Exploration teams (Lt. Ortiz, Sgt. Kwan, Dr. Reyes, Dr. Okafor; Capt. Mercer, Sgt. Alvarez, Dr. Novak, Dr. Haddad)
MALPS	One
MEDICAL	Maj. Hale on station in the Infirmary
LEVEL	1 (Alpha Centauri)

SECTION 02

Starting, Saving and Settings

TITLE SCREEN

The title screen offers **NEW GAME** and **RESUME**, plus **SETTINGS** and **SAVE FILES** (see Saving). Starting a new game when an autosave exists asks for confirmation, because the new game replaces it.

SAVING

- Autosave runs when something changes, every 10 seconds, and when the page is hidden or closed.
- Three manual save slots are available from the menu (MENU, then SAVE). Overwriting a slot asks for confirmation.
- Saves are kept in the browser's local storage. If the browser blocks local storage, the title screen reports that saving is unavailable.
- Timers pause while the game is closed. Mission, healing, cooldown, repair and rescue-request time remaining are stored and resume where they left off.
- An incoming wormhole in progress and a half-dialed gate are not saved. The gate resumes closed. Open wormholes resume open.

SAVE FILES: EXPORT AND IMPORT

- **SAVE FILES** opens from the title screen and from Settings. It lists the autosave and the three manual slots with an EXPORT button each, plus EXPORT ALL SAVES. An export is a .json file saved by the browser; exporting from a running game autosaves first so the file is current.
- **Import** with CHOOSE SAVE FILE. A bundle or a single save can be imported. Each save in the file gets a destination dropdown that lists only empty slots, with the slot of the same name proposed first. Nothing is ever written over an existing save.
- A save from a newer build than the one you are running is blocked and the reason is shown. A save from an earlier build is accepted and upgraded when it loads. A file that is not a complete save is skipped.
- After importing, use RESUME on the title screen to play the imported save.

SETTINGS

Settings apply to the interface only. Six accent colour presets are available: Cyan (default), Azure, Violet, Rose, Gold and Silver. The dialing computer and starmap keep their own colours. Text size can be Small, Normal or Large. Full screen is available from the Menu or with the F key. Settings are stored separately from game saves.

THE MENU

The header carries a single **MENU** button. It opens the Game Menu, which holds an Options block (**SETTINGS**, **HELP**, **SOUND**, **FULL SCREEN** and **TOUR**), the manual save slots, RETURN TO GAME and EXIT TO TITLE SCREEN. The Facility and the Gate Room scale to fit the window: the whole screen is laid out at a fixed width and scaled evenly, between 0.6 and 1.6 times, and centered with side margins on wide displays.

OPENING TOUR

A new game opens with a tour by General Hammond and Colonel Carter. It covers the Facility, resources, teams, the Gate Room and the Menu in eight short cards, and **SKIP TOUR** or Escape ends it. Game time is paused while the tour is open and the soundtrack keeps playing. A game you resume or load does not show the tour again. **TOUR** in the Menu replays it at any time.

MUSIC AND SOUND

The title screen plays the Main Title. In the base, calm music plays in turn (Emancipation, Hathor and Evolution). Tense music starts with an incoming wormhole or an overdue team. Battle music (Within the Serpent's Grasp) plays during a raid alert and while a team is out assaulting a System Lord's stronghold, and and a cleared level plays the end credits. Tracks crossfade. Settings has Master, Music and Effects sliders, and SOUND mutes everything.

SECTION 03

The Facility

The Facility screen shows up to ten rooms as a narrow column of cards on the left, with the selected room's panel taking the rest of the screen. Each card shows the room's name, level and status line. The Lab, Infirmary and Archeology Office list their staff at the top of the panel; the Briefing Room and Barracks do not, because teams are already listed in their own sections. The active missions strip appears above the rooms on every screen and lists everything currently away or under repair. Clicking an entry in the strip jumps to the relevant room. Every panel keeps a fixed size: a list that grows scrolls inside its own panel, so the Operations log and Mission Briefing are always on screen.

ROOM	FUNCTION
Gate Room	Dialing computer, gate controls, iris, starmap, mission builder and the Operations log. The only way in or out.
Briefing Room	Off-world teams with live timers, overdue teams, relations with factions, Hammond's paperwork and the Mission log.
Barracks	Raise teams, review rosters, open team stats, rename teams and members, issue armory loadouts.
Quartermaster	Supplies, power, naquadah converter, Air Force Logistics requests, Tel'tak supply runs, the reactor and the Gate Room upgrade ladder.
Infirmary	Injured personnel and their healing timers.
Science Lab	Research projects, Lab upgrades, permanent staff and the research points pool. Each project line has an ASK CARTER button.
Armory	Researched gear bought with supplies and held as stock until issued to a team.
Motor Pool	MALP stock and MALP tiers, vehicle purchases and upgrades.
Archeology Office	Permanent staff, inscriptions found on Exploration missions, glyph decoding, the artifact collection and the list of hidden worlds. A Linguist must be on station to decode.
Off-World Operations	Forward Operating Base and outpost manager: active bases with their roles, stockpiles and upkeep, outposts and their events, raid status and available sites. The room appears once a stronghold has been captured, or a base or outpost exists.

PERMANENT STAFF

Named staff from the show are assigned to a room and are not part of a team. They are always on station and count as a scientist in the Lab or a Linguist in the Archeology Office. Colonel Carter is in the Lab from the start; the others are assigned from the room's panel for supplies once the game reaches the level shown.

STAFF	ROOM	UNLOCKS	COST
Col. Samantha Carter	Science Lab	From the start	Free
Dr. Bill Lee	Science Lab	Level 4	400 supplies
Dr. Daniel Jackson	Archeology Office	Level 2	150 supplies

KEYBOARD SHORTCUTS

KEY	ACTION
1 to 9	Jump to a room: 1 Gate Room, 2 Briefing Room, 3 Barracks, 4 Quartermaster, 5 Infirmary, 6 Science Lab, 7 Armory, 8 Motor Pool, 9 Archeology Office. Off-World Operations has no number key; click its card
B	Facility screen
G	Gate Room
F	Full screen
S	Settings
Esc	Open the menu, or close an open panel

Shortcuts are ignored while typing in a text field and when Ctrl, Cmd or Alt is held.

SECTION 04

Resources

RESOURCE	WHAT IT IS FOR	HOW YOU GET IT
Supplies	Raising and sending teams, assault fees, rescue fees, MALPs, replacing a killed member, vehicle repair, Armory purchases, Lab upgrades	Exploration returns, Tel'tak runs, logistics shipments, base and outpost output, factions at Sworn
Power	Dialing. Each gate activation costs power for the destination.	Regenerates 12 per minute, faster with Reactor tiers. Naquadah converts to 15 power.
Naquadah	Converted to power in the Quartermaster, and burned as fuel by Tel'tak supply runs	Some exploration returns, some outposts
Research points	Science Lab projects, Gate Room ladder tiers, vehicles and Tel'tak restoration	100 per clean exploration return (scaled by hazard), faction payments at Sworn
Camaraderie	Per team. Reduces ambush chance and injury risk. Cannot exceed 500.	Completed Recon, Assault, Security and Assist missions
Standing	Per faction. Sets its tier and perks.	Diplomacy missions

CAMARADERIE TIERS

CAMARADERIE	TIER	REDUCTION TO AMBUSH AND INJURY RISK
0 to 49	0	0%
50 to 162	1	5%
163 to 274	2	16.25%
275 to 387	3	27.5%
388 to 499	4	38.75%
500	5	50%

Exploration and Diplomat teams do not use camaraderie.

SECTION 05

Teams and Camaraderie

Teams are the only people who go off-world. Each team has four members in fixed roles. A team can only be sent on a mission type it fits, and it can only be on one mission at a time. Each type is limited to the current campaign level: at Level 1 you may have one team of each type, at Level 2 two, and so on. Exploration is the exception: you start with two Exploration teams, so its limit is never below two.

TEAM	BRANCH	RAISE COST	SEND COST	ROLE
Exploration	Military and science	80	5	Explores regular worlds. Required for every exploration mission. Earns no camaraderie. You start with two.
Recon	Air Force Special Forces	20	3	Surveys worlds to reveal intel. Cuts ambush chance. Earns camaraderie.
Assault	Marines	40	8	Attacks known strongholds. Earns camaraderie.
Security	Air Force Security Forces	25	5	Escorts and fights. Neutralises most ambushes on exploration. Earns camaraderie.
Diplomat	Diplomatic Corps	50	10	Runs diplomatic missions with faction worlds. Earns no camaraderie.

TAGS AND LINKED GROUPS

Every team and every group has a required **5-character tag** of letters and digits, such as EXP01 or ALPHA. Tags are unique across teams and groups and are shown wherever space is short: the mission builder, the Barracks lists and the Active Missions list on the dialing computer. New teams get a default tag from their type and number (EXP01, REC01, ASL01, DIP01, SEC01) that you can change in the team details. A tag of the wrong length, or one already in use, is refused with a warning in the Operations log.

The Barracks **Linked groups** panel creates groups. Type a name and a tag, press **CREATE GROUP**, then press **EDIT** on the group and pick its teams from the list with ADD. A team can belong to any number of groups, so a Security team can sit in both an exploration group and an assault group. Membership can be changed at any time, and groups can be deleted. In the mission builder a ready group appears as one GROUP row that adds every team in it at once. A group is offered only when every member is eligible for the chosen mission type. While any member is away or stood down, the group row is greyed out and names the teams that are not ready, and the others can still be sent as individual teams. A team that belongs to two or more groups also stays listed on its own.

RAISE COSTS

The first team of each type you raise costs its listed raise cost (for Exploration, the first team beyond the two you start with). Each additional team of the same type costs 50% more than the base, so the next costs 1.5 times the base, then 2 times, and so on. Raised teams are named and their members are assigned roles automatically. Team and member names can be changed in the Barracks.

CAMARADERIE

- Recon, Assault and Security teams gain 10 camaraderie for a clean mission and 5 when a member is injured.
- An Assault mission gains 10 for a win and 5 for a loss, per team.
- Each killed or captured member costs the team 25 camaraderie.
- Camaraderie never drops below zero and never exceeds 500.

INJURY AND STANDING DOWN

A team with an injured member stands down until the member has healed. Injured members heal in the Infirmary (see Section 15). A team with a killed member cannot be sent until the member is replaced. A team with a captured member cannot be sent until the member is freed, by a successful assault on that stronghold or by a Special Operations rescue (Section 11).

SECTION 06

The Gate and Dialing

ADDRESSES

Every world has a seven-symbol address. You dial it on the dialing computer by rotating the ring and locking each symbol in turn. The ring is rotated in steps of 1 or 5 with the rotate keys. The status strip shows how many chevrons are locked and what the next action is.

THE DIALING COMPUTER DISPLAY

The dialing computer is drawn wide, in the style of the show's SGC console: seven red numbered chevron slots with the locked glyph shown inside, a Sequence Compiler grid of all 39 glyphs that lights as each one is encoded, a large status readout in the footer and an IDC transponder box. Point at any glyph in the compiler to see the constellation it stands for. The **Active Missions** list shows only teams and groups that are off-world, one row per mission: the tag (the group tag when the mission includes a group), a three-letter mission code (EXP, REC, ASL, DEF, AST or DIP) and the time left. Everything else that is busy, such as a MALP, a vehicle repair, a Tel'tak run, a rescue request, a logistics shipment or a Lab project, shows in the strip along the top of the screen, which reads NO OTHER ACTIVITY when idle. The starmap fills its own panel beside the dialing computer, with the selected world's details drawn on the map and the drone view opening inside it.

The first time you dial a world, the Operations log prints an address readout that names its six constellations and the point of origin.

POWER COST

Dialing costs 8 power per light year of the destination world's distance. Each world's distance is its star system's distance plus a fixed offset from -0.4 to +0.4 light years, based on its orbit order.

LEVEL	SYSTEM	DISTANCE	GATE COST RANGE
1	Alpha Centauri	4.4 ly	32 to 38
2	Barnard's Star	6.0 ly	45 to 51
3	Sirius	8.6 ly	66 to 72
4	Epsilon Eridani	10.5 ly	81 to 87
5	Tau Ceti	11.9 ly	92 to 98

POWER ECONOMY

- Power starts at 80 and cannot exceed 120.

- Base regeneration is 12 per minute. Reactor I, II and III raise it to 24, 36 and 48 per minute once each is routed. Power routing presets and the Level 5 artifact bonus (+6) also change it (Section 16).
- Auto-dial adds 5 power to the cost of any activation, including the automatic dial-out of a rescue team.
- A failed lock costs 2 power.
- Naquadah converts to 15 power. Conversion is blocked at the cap.

> **PLANNING NOTE**
>
> At the 120 cap, a Level 5 dial (92 to 98 power) leaves 22 to 28 power, so a second Level 5 dial has to wait for regeneration. A Level 1 dial (32 to 38) allows three from a full pool.

DIALING CONTROLS

- **LOCK** locks the symbol under the chevron. A correct lock advances the chevron.
- **AUTO-DIAL** locks each symbol automatically. Auto-dial adds 5 power to the cost.
- **CANCEL DIALING** stops a manual or automatic dial and resets the chevrons. It is available only while a dial is in progress.
- **DISENGAGE WORMHOLE** closes an open wormhole.
- **IRIS** opens or closes the iris. A closed iris keeps arriving teams out.
- **COMM 1** and **COMM 2** sit on the left of the keyboard, one above the other. COMM 1 flashes red when the wormhole is open to a planet with an overdue team. COMM 2 lights blue when the gate is dialed to a planet with a team on it. Both are greyed out otherwise (Section 16).
- **DRONE** sits below them and launches a reconnaissance drone flight at a surveyed assault target (Sections 9 and 16).
- **SEND MALP** sends the MALP alone through an open wormhole. **EMBARK** sends the selected teams. A MALP no longer rides with a team send.

WORMHOLES

- Once a wormhole is open it stays open for up to 5 minutes, then shuts down. The footer and arc count down, turning red in the last minute.
- Sending a team or a MALP does not close the gate. You can send several missions through one open wormhole.

INCOMING ACTIVATIONS

The gate also receives unscheduled incoming wormholes. The first can arrive no sooner than 20 minutes into play, and thereafter they arrive every 20 to 30 minutes. An incoming activation that falls due while the gate is dialing or open is postponed by a full interval. The alert shows the IDC transponder on the dialing computer: AWAITING IDC while the signal is coming in, IDC CONFIRMED with a team or allied name for a friendly signal, and NO IDC - UNRECOGNIZED SIGNATURE for a hostile one.

RETURNING TEAMS

Teams do not appear automatically when their mission ends. When a mission finishes, the team is marked RETURNING and the gate calls in an inbound activation. Its IDC transponder arrives partway through. Open the iris after the IDC shows and the team comes through, and rewards, research and injuries are applied on arrival.

- Teams on the same world that are due together return in one activation.
- If the gate is busy, the return waits for it to go idle. The exception is an open wormhole to that team's own world, in which case the team comes through it.
- If the iris stays closed, the team is turned away. Recon and Assault teams lose 5 camaraderie, Exploration teams lose none, and the gate calls again one minute later.
- The iris closes automatically when a return activation begins, so you must open it after the IDC appears.

> **HARRIMAN**
> Until Chief Master Sergeant Walter Harriman is installed as iris operator (Gate Room ladder, tier 2), you open the iris yourself. With him on station the iris opens on a valid IDC and closes on a hostile signal.

SECTION 07

07 The Starmap, Systems and Worlds

The starmap is a permanent panel in the Gate Room. It has two layers. The galaxy chart shows the five star systems as a local neighbourhood, and the system view shows the worlds, moons and orbital stations of the system you are in. Click a star to enter its system and use the GALAXY CHART button to return. Systems you have not reached show as uncharted dots. Map controls are on the map itself: zoom with the mouse wheel or the + and - buttons, pan by dragging, and use the recentre icon to reset the view.

SYSTEMS

A system shows **CLEARED** on the galaxy chart (a green ring and check) and in its header while every world in it is at peace. A raid that breaks a treaty drops the marker until peace returns. The Ancient Lab and the Ancient research ship count once explored.

LEVEL	SYSTEM	PLANETS	STRONGHOLDS	FACTION WORLDS	NOTES
1	Alpha Centauri	5	1	1 (Langaran)	Starting system
2	Barnard's Star	7	2	1 (Tollan)	Overdue ambushes begin on worlds at this level and above
3	Sirius	5	3	0	Three strongholds, no faction world
4	Epsilon Eridani	6	2	2 (Tok'ra, Free Jaffa)	Second stronghold added in 0.9.15
5	Tau Ceti	10	4	2 (Asgard, Nox)	Fifth and last system

Counts include strongholds and faction worlds. Faction worlds stay off the starmap until their hidden-world artifact is decoded, and Level 3 has an extra story-only hidden world (Abydos).

WORLD KINDS

- **Normal worlds** are explored by Exploration teams for supplies, naquadah and research.
- **Strongholds** are Goa'uld bases. They cannot be explored. They can only be attacked by an assault. Surveys reveal them.
- **Faction worlds** belong to a friendly faction. They are hidden worlds: decode the faction's artifact in the Archeology Office to reveal them, then reach them by diplomacy (Section 10).
- **Hidden worlds** are seven special worlds, one or two per level from Level 1 to Level 5, each behind its own artifact (Section 16). Decoding reveals the world on the starmap and in dialing.
- **Outposts** can be built on explored regular worlds (Section 9).
- **Peaceful worlds** have no ambushes. Captured strongholds become Peaceful, faction worlds become Peaceful at Partner tier, and regular worlds become Peaceful under a treaty (Section 10).

HAZARD

Every world has a hidden hazard rating of low, medium or high. Hazard sets the base ambush chance and scales exploration yield.

HAZARD	BASE AMBUSH CHANCE	EXPLORATION YIELD MULTIPLIER	NAQUADAH FIND CHANCE
Low	30%	1.0x	60%
Medium	40%	1.25x	75%
High	50%	1.5x	90%

INTEL TIERS

Worlds have five levels of intel. Intel is gathered by MALPs, Recon surveys and assist missions. Intel only goes up.

TIER	WHAT IS REVEALED
1	World name, type and environment (planet names such as P3X-3456 are visible from the start)
2	Whether the world is a stronghold or a faction world
3	Ambush risk hint and the hazard rating
4	Difficulty band (strongholds)
5	Exact stronghold defenses and the assault team limit

STRONGHOLD DIFFICULTY

Each level has a difficulty target. The Level 1 target is 15, and each later level is 10% higher. Each stronghold rolls within plus or minus 5% of its level target. Difficulty drives assault success odds.

SECTION 08

Off-World Missions

Missions are chosen in the Gate Room mission builder. The builder works in three steps. **1 TYPE:** pick one of the six mission type cards, each with a one-line rule. **REPEAT LAST** reloads the previous send, drops anything no longer available, tells you what was dropped and jumps to the review. **2 ASSETS:** the TEAMS, VEHICLES and MALPS tabs list only what the chosen type accepts and what is on station, with linked groups as single rows. **3 REVIEW:** shows the type, destination, teams, vehicles, MALP, odds and cost, and SEND. BACK and NEXT move between steps, and the gate status and overdue section stay above the steps.

MISSION TYPE	WHO GOES	TARGET	DURATION	NOTES
Exploration	Exploration, Recon and Security teams. An Exploration team is required.	A normal world	2:00	Yields supplies, naquadah and research
Recon Survey	Recon teams only	Any world	2:00	Reveals intel up to tier 4 (tier 5 with a Thermal Imager)
Assault	Assault, Security and Recon teams, with an optional Exploration team	A known stronghold	2:00	See Section 9
Assist	Recon, Assault or Security teams	An overdue team	2:00	Rescue only. See Overdue Teams below.
Special Ops rescue	A Special Operations team requested on the COMM 1 result screen	An overdue team or captured members	2:00	The gate dials out automatically. See Section 11.
Diplomacy	One Diplomat team with at least one Security team	A known faction world below Sworn, or a surveyed regular world or stronghold	5:00	No ambush. Raises faction standing, or works toward a treaty. See Section 10.
Defend	Security or Assault teams	A treaty world under a raid alert	2:00	No ambush. Repels the raid as the team goes through the gate. See Section 10.
MALP	The MALP, sent alone with SEND MALP	Any world	Free to launch	Surveys the world. See Section 12.

GROUP RULES

- Every team sent together is one mission with one mission log entry and one return.
- There is one ambush roll for the whole group. The group uses the lowest ambush chance among its teams, so the best protection in the group applies.
- A delay applies to everyone. Each team rolls its own injury chance. A group goes overdue as one.
- Vehicles, up to two per send, benefit the whole group.

AMBUSH

Ambush chance starts from the world's hazard and is then reduced in this order:

- **Recon:** the first Recon team multiplies the chance by 0.9. Each extra Recon team takes off a further 5 percentage points, with a floor of 5%.
- **Drone:** each drone tier takes 3 points off, and two drones stack.
- **Optics:** Tactical Optics takes 2 points, Night Vision 4 points, and the Thermal Imager 6 points.
- **Camaraderie:** the team's camaraderie tier then reduces the chance by its percentage, relatively.

- **Security:** on an Exploration mission, any Security team in the group neutralises 80% of ambushes. The effect does not stack.

An ambush does not always end in a casualty. An ambushed group that fights clear returns 1 to 3 minutes late. No mission goes overdue on a world below Level 2; ambushes there only delay and injure.

INJURY

After an ambush or a hit, each team has a 50% chance of an injury roll before reductions; if the roll applies, one member is injured unless camaraderie and armor prevent it. An injured member stands the team down until healed.

OVERDUE TEAMS

From Level 2 on, one ambush in 25 leaves the team stuck on the planet instead of delaying it. A stuck team does not report. Its mission shows PAST DUE (a plain late marker, with no ambush shown) once its scheduled return time passes, and it is flagged overdue 3:30 after that. The 15-minute self-return timer starts at the flag. Nothing about an ambush appears in the logs until you establish radio contact or the team comes home.

1. **Contact.** The overdue panel in the Gate Room has a DIAL button that sets the destination to the team's world. Dial as usual, then press COMM 1 with the wormhole open and play the radio minigame (Section 16). A successful fix gives a status report, including any casualty.
2. **Recall.** After contact, RECALL brings the team home in 1:00.
3. **Assist.** SEND ASSIST sends Recon, Assault or Security teams to rescue the team.
4. **Special Ops rescue.** After a COMM 1 fix, request a Special Operations team from the result screen (Section 11).

Assist teams cost 2 supplies each. They cannot include Exploration or Diplomat teams. A rescue clears the ambush and brings the overdue team home with its assisting teams. The overdue team's 15-minute timer pauses while an assist is en route. A Recon-only assist has a 10% ambush chance. Adding an Assault or Security team to the assist removes that chance. There is a 0.5% chance of a double ambush, which hits every assist team. An assist team that is ambushed goes overdue itself, and the original team's timer resumes.

RESCUE RECORD

Each team keeps a record of assists performed (Barracks, Team details) and of times it was rescued. Only assists performed earn rewards, at 1, 3, 6, 10 and 15 assists: the titles Rescuer, Lifeline, Guardian, Sentinel and Angel of the Gate. Reaching a title pays 25, 50, 75, 100 or 150 supplies plus the same in research points at once, and makes that team's assist travel 5% faster per title (25% at Angel of the Gate), applied on top of the COMM 1 fix band. A mixed assist group travels at its best rescuer's bonus. Special Operations units do not earn titles.

RETURN AND REWARDS

- **Exploration:** yield is 20 to 40 supplies, multiplied by hazard and vehicle bonuses. A pack caps how many supplies one return can carry. An injured team yields 70% of the supplies. A clean return earns 100 research multiplied by hazard. A team with an injured member earns no research.
- **Recon:** survey intel tiers 1 to 4 (5 with a Thermal Imager).

- **Assist:** a rescued team returns with its full yield and is not penalised for injuries unless a member is killed. Assist teams bring back no yield. A rescued team earns its regular camaraderie, and a failed assist earns none.
- **Diplomacy:** a faction gains 3 standing; a regular world or stronghold gains 1 and may sign a treaty. Security escorts earn 10 camaraderie, or 5 if injured.
- **Defend:** no yield. Each team earns 10 camaraderie.

END-OF-MISSION BRIEFING

When a mission ends, a briefing card opens in the Mission Briefing tab. A badge gives the outcome (CLEAN, AMBUSHED, INJURIES, OVERDUE or CASUALTIES). Below it are labelled rows: TEAM and WORLD, a full-width RESULT, YIELD and INTEL, INJURED and LOST (or PERSONNEL), FINDS, and the after-action report. Briefs are shown one at a time: **BACK** moves to an older brief and **NEXT** to a newer one, with a BRIEF n / total counter. A new brief arriving while you read an older one does not move you.

HIDDEN WORLDS AND FACTION CONTACT

Exploration returns no longer name faction home worlds. Instead, every successful Exploration return from a regular world rolls for the next undiscovered hidden-world inscription at or below your level: 40% on the first return, plus 30 points for each miss, so one is found by the third return at the latest. Decode it in the Archeology Office (Section 16). Decoding reveals the world and its address, files first contact with its faction and pays a one-time reward.

REVISIT EVENTS

An Exploration team returning from an already explored regular world has a 50% chance of an event on top of its normal yield: a supply cache (+35 supplies), data (+45 research points, more likely on ruins and mountains), local traders (+1 naquadah) or a Goa'uld patrol (lose 20 supplies, more likely on high-hazard worlds). The event is shown in the return text and the yield.

Each mission has an ID in the Mission log, with its timestamped events, yield, intel and team stats at launch and return.

SECTION 09

Strongholds and Assaults

ASSAULT COST

An assault costs the send cost of every team in the group, plus a stronghold fee of 150 supplies at Level 1. The fee rises by 25% per level: 150, 188, 234, 293 and so on.

SUCCESS ODDS

The estimate shown before sending is the average of three scores:

- **Camaraderie:** the average camaraderie of the attacking teams as a percentage of 500.
- **Team size:** the weighted team count as a percentage of twice the current level. Security teams count as 95% of a team.
- **Defenses:** 100 minus the stronghold's difficulty.

Weapon points from Armory gear, the Free Jaffa perk and the ATV vehicle bonus are added on top. The estimate is capped at 100%. Only the odds are estimated. The result is rolled.

RECONNAISSANCE DRONE

Once a stronghold is surveyed (intel tier 2 or higher) and a wormhole to it is open, the **DRONE** key on the dialing computer launches a reconnaissance flight. Tag every contact on the ground (guards, patrols and towers) with the drone, and stay out of their red view cones. Flying low and slow is quiet. An amber DEFENDER NEARBY warning shows before a defender can see you, and exposure drains quickly once you are clear.

CONTACTS TAGGED	ASSAULT SUCCESS	INTEL
All	+15 points	Tier 5
70% or more	+10 points	Tier 4
40% or more	+5 points	Unchanged
Under 40%	None	Unchanged

- **Spotted.** If the drone is spotted, the bonus is halved (rounded down), no intel is gained, and the assault success estimate drops by a further 10 points.
- **Cooldown.** The drone needs 5 minutes between recon flights. Rescue flights are exempt, and aborting a flight does not start the cooldown.
- **Expiry.** The recon result applies to the next assault sent to that world.

CASUALTIES

OUTCOME	KILLED	CAPTURED	INJURED
Failed assault (per member)	10%	10%	25%
Successful assault (per member)	2.5%	2.5%	6.25%

Camaraderie and armor reduce these odds relatively. The percentages above are before those reductions.

- A killed member is replaced instantly for 15 supplies, or free with the Free Jaffa Sworn perk, once per level.
- A captured member returns after a successful assault on that stronghold, or sooner through a Special Operations rescue.

- Vehicles that join a failed assault are each lost with a 25% chance. The rest return damaged.

COOLDOWN

After any assault, win or lose, all assaults are blocked for 20 minutes.

CAPTURING A STRONGHOLD

- The stronghold becomes Peaceful. There are no more ambushes there.
- Its intel is raised to tier 4.
- Held MALPs there are recovered.
- Captured members are recovered.
- When every stronghold in the level is captured, the next system unlocks with its worlds, and the team limit rises by one per type.

FINAL STRONGHOLD

The last stronghold of a level stays locked until 75% of the system's regular (non-stronghold) worlds, rounded down, have been explored or captured. The lock is shown on the starmap, and the blocked message says how many more worlds are needed.

SYSTEM LORDS

Each system has one System Lord, who holds its highest-difficulty stronghold: Apophis (Level 1), Cronus (2), Yu (3), Ba'al (4) and Anubis (5). While a lord lives he has no effect on the rest of the system beyond the story and his stronghold. The stronghold shows SYSTEM LORD with his name from intel tier 2, and the SGC files a briefing about him when the system unlocks.

- His stronghold cannot be assaulted until every other stronghold in the system is captured or under treaty.
- A drone recon must have been flown there first (open the gate to it and press DRONE).
- Defenses are 10% stronger and the assault fee is 1.5 times the normal fee.
- Winning pays 100 supplies and 200 research points per level number (Level 1: 100 and 200; Level 5: 500 and 1000) and the log reads that he has fallen.

FORWARD OPERATING BASES

Any captured stronghold can host a Forward Operating Base. Build one in the Off-World Operations room for 100 supplies and choose its role; that room also lists active bases, their roles and stockpiles, the total upkeep, raid status and available sites. It comes with a Garrison Commander, a scientist, an archeologist, a doctor, two medics and 10 security personnel, and the world shows an FOB badge.

- **Roles:** a base is given a role when it is established. A Supply depot makes 150 supplies and 30 research points every 6:30, a Research outpost 60 supplies and 100 research points, and a Power relay 70 supplies and 40 research points plus 2 gate power per minute, up to +8 in total across all relays. The archeologist adds 20 supplies and the scientist 10 research points to each output. Output goes into a stockpile capped at 1000

supplies and 500 research points, and production pauses when it is full. Changing a role costs 100 supplies and empties the stockpile.

- **Upkeep:** every 6:30 each base costs the SGC 15 supplies plus 5 for each base built before it, so the second costs 20, the third 25 and so on; the Off-World Operations header shows the total. If the SGC cannot pay, that base produces nothing for the interval and shows UNSUPPLIED (an unsupplied Power relay gives no power).
- **Collecting:** a Tel'tak sent to the world loads up to 400 supplies and 200 research points from the stockpile and pays them on return; the rest stays in the stockpile. An Exploration team with a Logistic Truck sent to the world collects up to 250 supplies and 125 research points instead; that trip brings back only the haul. Without a truck the send is blocked.
- **Raids:** while the System Lord of that level lives, every 15 minutes there is a 30% chance of a raid alert lasting 2:00. Answer it with a Defend mission from a Security or Assault team, as for a treaty world. If nobody answers, the garrison fights alone and the raiders carry off half the stockpile, supplies and research points alike.
- **Garrison losses:** with 6 or more fit defenders the garrison loses 0 to 2 people (more on higher levels); below 6 it loses 2 to 5. Of those lost, 70% are wounded and 30% killed. Wounded recover one per 2:00; killed are replaced one at a time with REPLACE for 15 supplies each, and the Free Jaffa free replacement applies.
- **Overrun:** if no fit defender remains, the base is lost with its stockpile and the stronghold reverts to hostile and must be assaulted again.
- **Lord defeated:** raids on that system's bases end for good. RECALL BASE (two clicks) abandons a base and its stockpile.

OUTPOSTS

Any explored regular world (not a stronghold, faction world, the lab or the ship) can host an outpost, built and managed in the Off-World Operations room beside the bases and marked with an OUTPOST badge on the starmap. An outpost has no stockpile and needs no Truck or Tel'tak: it delivers straight to the SGC every 6:30.

- **Cost:** 60 supplies for the first outpost, plus 20 for each outpost already built. The garrison is 4. POST 1 replaces a lost guard for 20 supplies. ABANDON asks for confirmation.
- **Upkeep:** 10 supplies per interval, plus 3 for each level above 1.
- **Output:** set by the world type and raised 25% for each level above 1.

WORLD TYPE	OUTPOST OUTPUT PER 6:30 (LEVEL 1)
Temperate forest	45 supplies
Arid desert	15 supplies and 1 naquadah
Frozen tundra	15 supplies and 30 research points
Ocean archipelago	30 supplies and 15 research points
Volcanic highlands	10 supplies and 2 naquadah
Jungle lowlands	30 supplies and 10 research points
Mountain plateau	15 supplies, 10 research points and 1 naquadah
Ancient ruins field	45 research points

OUTPOST EVENTS

After each delivery an outpost rolls for an event: 15%, 25% or 35% on a low, medium or high hazard world. Each event has a 2:00 decision window and a default that applies if you do not answer. Costs and rewards scale like output.

- **Raid:** REINFORCE for 40 supplies, or HOLD and lose 0 to 2 guards. An outpost with no guards left is overrun.
- **Trader:** pay 50 supplies for 80 research points, or decline. More common on settled worlds.
- **Site found** (ruins, mountains and deserts): pay 20 supplies to survey it for 100 research points, 80 supplies or naquadah, or ignore it.
- **Tremors** (seismic worlds): pay 50 supplies, or skip one delivery.

SECTION 10

Factions and Diplomacy

Factions are friendly peoples who can be won over by diplomacy. Each faction has a standing score that rises with diplomatic missions. Standing never falls, and tiers never fall back.

TIER	STANDING NEEDED	EFFECT
Contact	1	Relations established. Standing begins to accrue.
Partner	5	Faction world becomes Peaceful. First perk active.
Ally	12	Second perk level
Sworn	25	Third perk level and income. No further diplomatic missions.

DIPLOMATIC MISSIONS

A diplomatic mission needs exactly one Diplomat team, accompanied by at least one Security team, to a known faction world below Sworn. It takes 5:00, has no ambush roll, and returns as one group. Each completed mission adds 3 standing. Vehicles cannot join a diplomatic mission.

TREATIES WITH REGULAR WORLDS AND STRONGHOLDS

Diplomacy also works on surveyed regular worlds and strongholds (intel tier 2 or higher) on the current level. Each completed mission adds 1 standing with that world. Before the mission is resolved the game rolls for a treaty; the chance depends on the standing the world already had, and a treaty is guaranteed when standing reaches the threshold. A world under treaty cannot be targeted again.

	REGULAR WORLD	STRONGHOLD
Treaty chance per mission	10% + 15% per standing held	5% + 10% per standing held
Guaranteed at standing	4	6
Average missions to a treaty	About 3	About 4
Extra mission cost	None	10 supplies
Raid check (every 15:00)	15%	30%

- **Regular world:** becomes Peaceful, so ambushes stop. It still has to be explored to count as explored.
- **Stronghold:** stays hostile and must still be assaulted to clear the level. While under treaty it counts as one resolved world toward the final-stronghold lock, and it is not treated as the final stronghold. Sending an assault against it voids the treaty.

RAIDS AND THE RAID ALERT

Every 15 minutes each treaty world on the current level is checked for a raid. A raid starts a 2:00 alert, shown as a RAID ALERT badge on the world and a chip in the active strip. To answer it, send a DEFEND mission with a Security or Assault team to that world: the raid is repelled the moment the team goes through the gate, and the team returns after 2:00 with 10 camaraderie. If nothing goes through in time, the treaty is void and the world's standing is halved, rounded down. A voided stronghold treaty stops counting toward the lock. The gate must be free and powered to dial within the 2:00, so a busy gate can cost you the treaty.

The first time a faction becomes known, by any route, the log records that your team discovered it and that it seemed open to diplomacy. An Exploration visit to a faction world identifies it, so it appears in Faction Relations and a Diplomat mission can be sent.

PERKS

FACTION	LEVEL 1 PERK (PARTNER)	LEVEL 2 PERK (ALLY)	LEVEL 3 PERK (SWORN)
Langaran	Exploration supply yield +10%	+20%	+30%
Tollan	Research projects 10% faster	20% faster	30% faster
Tok'ra	Stronghold strength revealed on known strongholds	Ambush odds revealed on every world	Stronghold defenses 10% weaker
Free Jaffa	Assault odds +5 points	+10 points	+15 points and one free casualty replacement per level
Asgard	Missions, recalls and rescues 10% faster	20% faster	30% faster
Nox	Infirmary healing 10% faster	20% faster	30% faster

SWORN INCOME

At Sworn, a faction pays out every 10 minutes. The first payment arrives 10 minutes after reaching Sworn. Langaran pays 250 supplies, Tollan pays 250 research points, and the other four pay 50 supplies each.

Faction placement: Langaran on Alpha Centauri, Tollan on Barnard's Star, Tok'ra and Free Jaffa on Epsilon Eridani, Asgard and Nox on Tau Ceti. Faction worlds are hidden worlds: decode the faction's artifact in the Archeology Office (Section 16) to reveal the world and file first contact, and only then can a diplomatic mission be sent.

SECTION 11

Logistics, Tel'tak Runs and Rescue Teams

AIR FORCE LOGISTICS

From the Quartermaster you can request supplies from six real Air Force bases. Requests are free. Shipments arrive after a delivery time, and supplies are credited on arrival with an Operations log entry.

UNIT	DISTANCE	TRANSPORT	DELIVERY	LOAD	UNLOCKS AT LEVEL
Peterson SFB, Colorado	10 km	Truck	1:00	12	1
Hill AFB, Utah	800 km	Helicopter	4:00	25	1
Travis AFB, California	1,600 km	C-130	7:00	55	2
Wright-Patterson AFB, Ohio	1,900 km	C-130	8:00	70	3
Ramstein AB, Germany	8,000 km	C-17	14:00	125	4
Kadena AB, Japan	9,500 km	C-17	16:00	150	5

- Each unit carries one shipment at a time, and no more than two shipments can be in transit at once.
- When any shipment arrives, all logistics requests are blocked for that transport's cooldown: Truck 2:00, Helicopter 3:00, C-130 5:00, C-17 8:00.
- A second arrival during a cooldown extends it to the longer remaining time.

SPECIAL OPERATIONS RESCUE TEAMS

Five Special Operations teams can be requested to rescue an overdue team or to free captured members on a stronghold. The request is made only from the COMM 1 result screen: dial the world, play COMM 1 (Section 16), and once the fix is made a Request Rescue list appears under the Sitrep. COMM 1 works on a world with an overdue team and on a world that holds captured members, and the list offers each target found there. Each unit unlocks at its level. Rescue requests have their own limits and do not use the logistics cap or cooldowns.

LEVEL	UNIT	BASE	TRAVEL TO SGC	FEE	DELAY CHANCE
1	Army Rangers (75th Ranger Regiment)	Fort Moore, Georgia	5:00	10	40%
2	Air Force Pararescue (23rd Special Tactics Squadron)	Hurlburt Field, Florida	4:00	15	30%
3	Marine Raiders (MARSOC)	Camp Lejeune, North Carolina	3:00	20	20%
4	Navy SEALs (Naval Special Warfare)	Coronado, California	2:00	25	10%
5	Delta Force (1st SFOD-D)	Fort Liberty, North Carolina	1:00	30	None

- The request is free. The fee is paid when the team goes through the gate.
- On arrival at the SGC the team stands by. As soon as the gate is idle, there is no incoming activation, power covers the dial (gate cost plus 5 for auto-dial) and supplies cover the fee, the gate dials out on its own, visibly, and sends the team. The card shows what is holding it if it has to wait.
- A rescue always succeeds. The mission takes 2:00. A team can be delayed on the way to the SGC by 1 to 3 minutes, with the chance shown in the table. The top team is never delayed.

- An overdue team is rescued as with an assist: the ambush is cleared, its 15-minute timer pauses while the rescue runs, and it comes home through the gate as usual. Captured members are freed on the spot and are ready for duty.
- If the target no longer needs rescue when the team is ready to go through the gate (the overdue team returned on its own, or the stronghold fell), the team stands down. No fee is charged. A team can be requested again as soon as its rescue is done.

TEL'TAK CARGO SHIPS

Two Tel'tak cargo ships are wrecks that can be restored in the Lab. One is recovered from the Level 2 stronghold and one from the Level 3 stronghold. Each costs 600 research points, takes 12:00, and costs 200 supplies to finish. Once restored, a Tel'tak is put in service from the Quartermaster, under Air Force Logistics, and runs independent supply missions to an explored world you choose. Each ship has its own row with a SEND button and a Destination button that opens an in-game list of explored worlds and Forward Operating Bases showing distance, round trip, hazard and yield or stockpile, and the ship remembers its last destination.

- Each run costs 2 supplies and naquadah for fuel: the light years to the system divided by 4, rounded up, which is 2 on Levels 1 and 2 and 3 on Levels 3 to 5. The ship will not launch without it, and the SEND button shows the cost. A run takes 2 minutes per light year of round trip.
- A run returns the world's maximum supply roll: 100 multiplied by the hazard multiplier.
- One run in five is delayed by 1 to 3 minutes. Tel'tak runs are never ambushed and never damaged.
- Each run has its own mission ID and a TEL'TAK tab in the Mission log, showing the ship and which wreck it came from, the destination, launch and end times, any delay, the supplies returned and the departure, arrival, delay and return events.

A Tel'tak can also be sent to a world with a Forward Operating Base. It loads up to 400 supplies and 200 research points of the base's stockpile on arrival (the rest stays in the stockpile) and pays them on return; the run costs the usual 2 supplies and naquadah fuel and shows the haul in the mission log. Tel'tak runs are sent with SEND only.

While a run is out, a small gold arrow for the ship travels along its route on the starmap, in both the galaxy chart and the system view. It points outbound on the way there and turns around for the return leg.

SECTION 12

Motor Pool: MALPs and Vehicles

MALPS

A MALP is a remote survey probe. You start with one, you can hold up to three, and you can buy more for 25 supplies each. Only one MALP goes through each activation. Extras stay home as spares. A MALP goes alone: send it with SEND MALP on the dialing computer. It no longer rides with a team send, and a MALP sent alone gets no Recon-team ambush reduction.

- A MALP that is lost is removed from stock. Buy a replacement in the Motor Pool.
- A MALP held on a stronghold is recovered when that stronghold is captured.
- Survey intel from a MALP depends on its tier. A MALP at tier 0 or 1 reveals intel 1. Tiers 2 to 5 reveal intel 2 to 5.
- When a MALP is ambushed, it returns with the odds in the table below.

MALP TIER	RESEARCH	SUPPLIES	PROJECT TIME	RETURN ODDS WHEN AMBUSHED	INTEL REVEALED
0 (base)	none	none	none	30%	1
1	100	50	2:00	20%	1
2	200	100	6:30	40%	2
3	300	150	11:00	60%	3
4	400	200	15:30	80%	4
5	500	250	20:00	100%	5

A MALP tier is per unit. A rebuilt MALP starts again at tier 0. A MALP being upgraded sits in the Lab and cannot launch until the project finishes. MALP upgrades do not affect mission speed.

VEHICLES

Vehicles are bought with research points in the Motor Pool. Up to three of each type can be owned, and up to two vehicles can join one send. A vehicle's bonuses add together with those of the others on the same send, and the whole group benefits.

VEHICLE	PER TIER EFFECT	PURCHASE AND UPGRADES
Logistic Truck	+5% exploration yield	Buy 200 (tier 1), then tier 2 300, tier 3 450, tier 4 600, tier 5 750
Unmanned Drone	-3 points ambush chance	Same costs as the Truck
ATV / Side-by-side	-10% mission time (capped at 50%) and +2 points assault odds	Same costs as the Truck

- Upgrades need the vehicle at home. A damaged vehicle must be repaired first.
- An ambushed send damages its vehicles. Repair costs 10 supplies and takes 3 minutes, less with Armor parts.
- A failed assault loses each vehicle with a 25% chance and damages the rest; Armor parts lower the loss chance.
- Vehicles do not go on assists, MALP-only sends or diplomatic missions.

SECTION 13

Research: Science Lab and Upgrades

THE RESEARCH ENGINE

The Science Lab runs timed research projects. A project costs research points and supplies up front, and runs at base pace. Scientists and linguists on station in the Lab cut project time by 15%. Colonel Carter is permanent Lab staff and always counts as a scientist on station. Research never pauses while the game is running. You can rush a project to finish it immediately for 20 research points per minute of remaining time, rounded up.

- Only one project runs at a time at the base slot count. Lab upgrades add more slots.
- Each extra scientist or linguist speeds one additional slot.
- The same Armory item cannot be researched twice, and only one Gate Room upgrade can be in progress.

VEHICLE PARTS

Vehicle parts are extras on top of the five vehicle tiers. Each vehicle type has its own set: Armor, Engine and Cargo for the Truck and the ATV, and Armor, Engine and Sensors for the Drone. A part applies to every vehicle of that type. Each part has three levels. A level is **researched** in the Lab (VEHICLE PARTS tab) and then **fitted** in the Motor Pool (Vehicle parts section on the vehicle's tab). The next level can be researched once the previous one is fitted. Lab tier discounts and Carter's insight apply to the research.

LEVEL	LAB RESEARCH	LAB TIME	FIT IN MOTOR POOL
I	75 research + 25 supplies	3:00	25 supplies
II	150 research + 50 supplies	6:00	50 supplies
III	225 research + 75 supplies	9:00	75 supplies

PART	EFFECT PER LEVEL	FITS
Cargo	+5% exploration yield	Truck, ATV
Engine	-10% mission time (ATV); -5% (Truck, Drone). Total time cut stays capped at 50%	All three
Sensors	-3 points ambush chance	Drone
Armor	-33% repair time and -8 points on the failed-assault vehicle loss chance (25% falls to 17%, 9%, 1%). At level III repairs are free and instant, and ambush damage is repaired on return at no cost	All three

LAB UPGRADES

The Lab has three upgrade tiers, bought with supplies and built over time. The Lab is offline during construction. Running projects pause, and rush is unavailable.

TIER	SUPPLIES	BUILD TIME	EFFECT	PROJECT SLOTS
0 (base)	none	none	Base pace, base cost	1
1	100	2:00	+5% pace, -5% project and rush cost	1
2	250	5:00	+10% pace, -10% project and rush cost	2
3	500	10:00	+15% pace, -15% project and rush cost	3

GATE ROOM UPGRADE LADDER

The Gate Room has a shared ladder of seven tiers. Each tier's research project must finish in the Lab before the tier can be bought. Security and Harriman are bought with supplies after research. The Reactor tiers are paid entirely in research.

TIER	UPGRADE	RESEARCH	TIME	SUPPLIES	EFFECT
1	Gate security detail	100	2:00	150	Security personnel stop intruders stealing supplies
2	Iris operator: Chief Master Sergeant Walter Harriman	200	4:00	200	Opens the iris on a valid IDC and closes it on a hostile signal
3	Dialing speed I	300	5:00	100	Auto-dial steps 60 ms, lock pause 400 ms
4	Reactor I	600	6:00	none	Power regeneration 24 per minute
5	Dialing speed II	500	8:00	200	Auto-dial steps 45 ms, lock pause 250 ms
6	Reactor II	1,000	10:00	none	Power regeneration 36 per minute
7	Reactor III	1,000	14:00	none	Power regeneration 48 per minute

POWER REGENERATION

Power regenerates at 12 per minute with no Reactor tier, 24 with Reactor I, 36 with Reactor II and 48 with Reactor III. A finished Reactor tier adds its power only after you route its connection at the Quartermaster (Section 16). Regeneration stops at the 120 power cap.

SECTION 14

Armory and Alien Technology

EQUIPMENT MODEL

Gear is researched in the Lab, bought one unit at a time with supplies, and held in stock until you issue it to a team as a loadout in the Barracks. Each team has four slots: weapon, armor, pack (Exploration only) and optics. Each equipment line is researched in order, so the first item in a line must be researched before the second.

The first item in each line costs 100 research, 2 minutes and 40 supplies. Each later item costs 100 research, 2 minutes and 40 supplies more than the one before. The tables below give the exact costs for the first four items in each line.

PACKS (SUPPLY CARRY CAP PER EXPLORATION RETURN)

ITEM	CAP	RESEARCH	TIME	SUPPLIES
Field Pack (default)	30	none	none	none
Rucksack	45	100	2:00	40
Tactical Ruck	60	200	4:00	80
Expedition Pack	75	300	6:00	120
Heavy Haul Pack	95	400	8:00	160

BODY ARMOR (CUTS INJURY AND CASUALTY ODDS)

ITEM	CUT	RESEARCH	TIME	SUPPLIES
Flak Vest	5%	100	2:00	40
Interceptor Vest	10%	200	4:00	80
Plate Carrier	15%	300	6:00	120
Marine Trauma Plate Carrier	20%	400	8:00	160

WEAPONS (ASSAULT POINTS AND INJURY CUT)

TEAM	ITEM	ASSAULT POINTS	INJURY CUT
Exploration	MP5 / P90 submachine gun	none	3% / 6%
Recon	MP5SD suppressed / M110 sniper rifle	+3 / +7	3% / 6%
Assault and Security	M4A1 / M249 SAW / M203 grenade launcher	+4 / +8 / +11	3% / 6% / 8%
Recon, Assault or Security	Jaffa staff weapon (alien)	+15	10%

OPTICS (AMBUSH CHANCE CUT FOR THE TEAM)

ITEM	AMBUSH CUT	SPECIAL
Tactical Optics	2 points	
Night Vision	4 points	
Thermal Imager	6 points	A Recon survey also reveals intel tier 5

ALIEN TECHNOLOGY

- **Goa'uld healing device** (200 research, 4:00, 150 supplies) halves Infirmary healing time. It is recovered as a fixed artifact from a Level 1 world.
- **Jaffa staff weapon** (300 research, 6:00, 150 supplies) is a weapon for Recon, Assault and Security teams. It is recovered as a fixed artifact from a Level 2 world.
- **Tel'tak cargo ships** (600 research, 12:00, 200 supplies each) are described in Section 11.

SECTION 15

Infirmary and Healing

Injured members heal in the Infirmary. Base healing takes 5:00 per member. Maj. Hale, when on station, halves that to 2:30. The Goa'uld healing device halves it again. With both, healing takes 1:15. Nox's faction perks reduce healing further. Healing time runs only while the game is open, and it is saved with your game.

A team with an injured member stands down until that member heals, so it cannot be sent on missions. Killed members are not healed. They are replaced in the Barracks, and a replacement costs 15 supplies, or nothing once per level with the Free Jaffa Sworn perk.

SECTION 16

Minigames and Optional Challenges

Six minigames sit on top of the base game. Radio contact (with its drone flight), reactor routing and glyph decoding are part of normal play. Hammond's paperwork, Carter's techno-babble and the After-Action Report are optional.

Reactor routing, glyph decoding and Hammond's paperwork are styled as devices: a rugged control tablet, a translation console and a desk with a binder. Each scales to fit its panel.

No minigame opens as a popup. Each runs inside the panel of the room it belongs to: reactor routing in the Quartermaster, glyph decoding in the Archeology Office, Hammond's paperwork in the Briefing Room, Carter's questions in the Science Lab and radio contact in the dialing computer panel. Untimed games (reactor, glyph, Carter) are parked when you choose another room and return when you come back. Timed games (Hammond's paperwork and radio contact) lock navigation until they are finished or closed, with a warning in the Operations log.

RADIO CONTACT: COMM 1 AND COMM 2

Radio is the only way to learn what happened to a team on the far side. Dial the planet, wait for the wormhole, then use the COMM keys on the dialing computer. The 5-minute wormhole timer keeps running, and the minigame ends with no contact if the gate closes first.

- **COMM 1** is for overdue teams. First tune the frequency out of the static by holding the dial steady inside the window. Then a reconnaissance drone launches through the open wormhole and you fly it to the team (see Drone flight below).
- **COMM 2** is for any other team on the planet. It is a simple tune-to-frequency task, followed by a recall prompt. A recalled team is home in 1:00 and brings back 80% of the full yield. COMM 2 can recall Exploration, Recon and Security missions, but not Assault, Assist, Diplomacy or Defend missions.
- A team that is stuck but not yet flagged overdue does not answer COMM 2 and cannot be recalled. A team that was ambushed and fought clear reports that when you call.
- Difficulty scales with the world's hazard rating. Medium hazard has about twice the search area of Low, and High has about three times, with heavier static and a faster sweep.
- **The radio.** Tuning uses a field radio with a rotary knob (drag it or use the wheel), arrow keys for fine tuning, VOL + and - for micro trim, PRE + and - for coarse steps and CLR to abort. The result appears on a compact control unit with a colour LCD, a D-pad and A, B and C keys that press the first three options on screen; O/R or X closes it and the BRT keys change the brightness.

DRONE FLIGHT

The drone flies in a free first-person view of the planet, and the wormhole timer keeps running. The feed shows a signal strength that rises as the drone nears the team, and a SIG marker on the radar. Holding the reticle on the team's heat signature locks it, which counts as a Pinpoint fix. Alternatively, switch to the marker tool, place a fix

marker on the radar and confirm it. If the wormhole closes first, the placed marker is scored as it stands, or Poor if none was placed. Link loss ends the flight.

- **Controls.** W A S D fly, Q and E lower and raise, Shift boosts. Drag the feed or use the arrow keys to look, the wheel zooms, and T switches between optical and thermal.
- **Display.** The drone console is an olive rugged display in the style of a marine radar unit, with green readouts for heading, altitude, speed and zoom and a radar with range rings and a sweep. Covered ground shows as a faint green tint so defender view cones read clearly. Left keys: F1 optical or thermal, F2 mouse look, F3 place fix, end survey or continue, F4 confirm fix, F5 info, F6 abort. Right keys: F7 and F8 zoom, F9 climb, F10 descend, F11 level, F12 boost. F13 shows the controls card and the BRT keys change brightness.
- **Drone tier.** The drone is as good as the best Unmanned Drone in the Motor Pool, or the basic drone if there is none. Higher tiers fly faster, see further and zoom more.

FIX BAND	ERROR	ASSIST TRAVEL	RESCUED TEAM YIELD	ASSIST INTEL
Pinpoint	Within 30 m	1:00	100%	Full set plus one extra tier
Good	30 to 80 m	1:30	90%	Full set
Rough	80 to 160 m	2:00	80%	One tier fewer
Poor	Over 160 m, or no marker	3:00	70%	None

A COMM 1 fix is also how Special Operations rescue teams are requested. COMM 1 works on a world that holds captured members as well as on one with an overdue team; with no overdue team the assist rows are not shown.

REACTOR POWER ROUTING

The reactor feeds three outputs: the gate (power regeneration), the Lab (research pace) and the shields (fewer losses to ambush injuries and Goa'uld raids). Routing decides how power is split, and keeps the reactor stable.

- **Power events.** After 11 to 15 wormhole activations, outbound or incoming, the reactor becomes unstable. Go to the Quartermaster: when the gate is closed and idle, the conduit puzzle opens in its panel. The count restarts when you solve a routing puzzle.
- **The tablet.** Reactor routing runs on a rugged control tablet in the Quartermaster panel: a screen with a stage counter, eight side buttons (up, down, left, right, SEL, ALT, INFO, ABORT), five number keys and three knobs. Keyboard: arrows, Enter or Space for SEL, Backspace, Delete, X or 0 for ALT, I for INFO, 1 to 5, Esc to leave. INFO shows help for the current puzzle. Large jobs run as two stages, shown by the dots in the header.
- **Conduit puzzle.** A 4 by 4 grid of conduits. Fill each with a value from 1 to 5. No value may repeat in a row or column, and every row and column must add up to its target. Some conduits are locked. Move the cursor with the arrows and press 1 to 5, or press SEL to cycle the value.
- **Unanswered events.** Pressing ABORT twice during a power event, instead of solving it, knocks one output offline at random, but never the output your current preset boosts. A Gate output offline stops power regeneration (the gate can still be dialed). A Lab output offline pauses research. A Shields output offline gives no reduction. RE-ROUTE POWER at the Quartermaster opens the puzzle again and restores everything when solved. Escape does not abandon an event.

- **New connections.** Installing a Reactor tier or the ZPM opens a two-stage routing job (see the table below). A new Reactor tier adds its power only after both stages are solved. Leaving with ABORT keeps finished stages and returns you to the same stage later, with no penalty. The ZPM has no gameplay effect yet; routing it is only a record of the install.
- **Presets.** The first solved puzzle unlocks presets, which you can change at any time at no cost from the Quartermaster.

JOB	STAGE 1	STAGE 2
Power fluctuation	Conduit puzzle	Breaker sequence
Reactor I	Power balance	Load shedding
Reactor II	Pipe routing	Breaker sequence
Reactor III	Power balance	Phase match
ZPM	Pipe routing	Phase match
Restore an offline output	Conduit puzzle	none

- **Power balance.** Turn the three knobs (gate, lab, shields) until each output sits in its green band and hold it there. Each output is also nudged by the knob before it. Drag or scroll a knob, or pick one with left and right and turn it with up and down.
- **Pipe routing.** Rotate the tiles of a 5 by 4 grid so power flows from the PWR block to all three outputs. SEL rotates clockwise, ALT counter-clockwise, or tap a tile.
- **Breaker sequence.** Watch five breakers light up, then flip them in the same order with keys 1 to 5. The sequence is four long during a power event and five otherwise. A mistake replays the same sequence.
- **Phase match.** Match a dashed signal with the AMP, FRQ and PHS knobs until all three lamps are green, then hold steady.
- **Load shedding.** Switch systems off until the total load sits in the green band just under the reactor cap. Life support and the gate core are locked on.

PRESET	GATE REGENERATION	LAB PACE	SHIELD REDUCTION
Balanced	Base	Base	10%
Gate-heavy	+50%	-25%	7.5%
Lab-heavy	-25%	+50%	7.5%
Shield-heavy	-25%	-25%	15%

Shields cut the odds of an ambush injury by the reduction shown. An unanswered Goa'uld raid on a treaty world is absorbed by the shields with the same percentage chance, and the treaty holds. Shields do not affect assault casualties.

GLYPH DECODING AND ARTIFACTS

Ten collectable artifacts, two per star system, are hidden behind inscriptions. Seven further hidden-world artifacts are described at the end of this section. They are separate from the alien technology in the Armory. Decoding never affects the Ancient Facility on Level 5, though Level 5 inscriptions mention it.

- **Finding inscriptions.** Each level has one fixed normal world whose first successful Exploration mission always finds the first inscription of that level. The second is a chance find on any other normal world of that level: 5% on the first Exploration mission, rising 15 points for each mission that misses, and resetting on a find.
- **The console.** Decoding runs on a console: a teal Message Relay monitor, a lit artifact tray, six glyph keys, a D-pad with ENTER, and BOOK, CLEAR, GIVE UP and CLOSE keys. Keyboard: arrows, Enter, Backspace for CLEAR, B for the book, 1 to 6, Esc to close.
- **Decoding.** Open the Archeology Office and press DECODE. A Linguist must be on station, and Dr. Jackson counts. Attempts are unlimited and carry no penalty. Each artifact uses one of three puzzles, in the order 1, 2, 3, 2, 3, 1, 1, 2, 3, 2.
- **Fragment matching.** The monitor marks one whole glyph and the six keypad keys show the broken fragments. Press the key of the fragment cut from the marked glyph; the D-pad changes the marked glyph. Four mistakes are allowed.
- **Tablet reassembly.** A carved stone slab is cut into 3 by 3 tiles. The slab sits on the lit tray. Move the cursor with the D-pad, press ENTER on a tile to pick it and ENTER on another to swap them (or tap tiles), until the inscription is whole, within 14 moves.
- **Cipher deduction.** Find a four-glyph code from six glyphs, with no repeats, in 8 guesses. Keys 1 to 6 enter glyphs, CLEAR backspaces and ENTER submits. Green marks the right glyph in the right place and amber the right glyph in the wrong place.
- **Hints.** Every failed or abandoned tablet unlocks one of three text hints for that artifact, and each hint also solves one piece in later attempts (a pair, a tile or a code position). The BOOK key gives a visual hint once per attempt.
- **Recovering the artifact.** A successful decode reveals an ARTIFACT SITE, a normal world of that level. A second successful Exploration mission there recovers the artifact.
- **System Lord seal.** After a decode, if the System Lord of that level has a stronghold you have not located, the tray shows the seal carved on the artifact and keys 1 to 5 show the five lords' marks. Press the key of the lord who carved it to reveal his stronghold. A wrong key, or CLEAR, gives nothing and costs nothing.

LEVEL	BONUS WHEN BOTH ARTIFACTS ARE COLLECTED
1	+15% supply yield on Exploration missions
2	+10% research points from Exploration missions
3	Ambush chance 5 points lower for all teams
4	Assault injury and casualty odds 10% lower (stacks with armor)
5	+6 gate power regeneration per minute

Collecting all ten puts the Ancient Repository Stone on display in the Archeology Office. It adds +10% camaraderie gain for all teams and +5% research yield.

HIDDEN WORLDS

Seven further artifacts, separate from the ten above, each reveal a hidden world. They are found as inscriptions on Exploration returns (Section 8) and decoded in the Archeology Office with the same three glyph puzzles, from the Hidden worlds list under the level tabs.

LEVEL	HIDDEN WORLD	FACTION	ONE-TIME REWARD
1	Langara	Langaran	100 supplies
2	Tollana	Tollan	120 research points
3	Abydos	None (story only; becomes an explorable regular world)	200 supplies
4	Vorash	Tok'ra	150 research points
4	Chulak	Free Jaffa	250 supplies
5	Orilla	Asgard	250 research points
5	Nox Haven	Nox	300 supplies

A successful decode reveals the world and its address on the starmap and for dialing, files first contact with its faction, pays the reward and opens a popup with a short story about the world, the faction's history, the benefits of each tier and its Sworn income. READ in the list reopens the popup.

HAMMOND'S PAPERWORK

An optional challenge in the Briefing Room. Twelve forms arrive, and you have 90 seconds to deal with them. The forms sit on an open binder with four coloured tabs. File each form in the tab matching its type (keys 1 Supply, 2 Personnel, 3 Medical, 4 Operations, or click the tab), or press D to deny it. A checklist on the facing page ticks as you go, a flatbed-style timer counts down, and a sticky note carries Hammond's comment on the last form. Four of the twelve are flawed and must be denied: a stated total that does not equal quantity times unit cost, a missing signature, a form routed to the wrong department, or an expired date. Ten correct answers pass, and a third mistake fails it.

- **Reward.** 50 supplies, and the next 2 missions that include a Logistic Truck, launched within 15 minutes, carry 75% more supplies. The bonus adds to the truck's tier bonus (+5% per tier), and raises that mission's carry cap by 75%. Unused charges are lost when the window ends.
- **Cooldown.** 10 missions, counted from missions launched after you finish. Every launched mission, including assists, counts. Failing or walking away has no cooldown.

AFTER-ACTION REPORT

An optional typing task in the Briefing Room. Open a closed Exploration, Recon, Assist or Assault mission in the mission log and press COMPLETE AAR. Type the mission details into the report from the log: type, launch and return times, teams, world, injuries, casualties, yield and intel tier. Case does not matter. There is no time limit, and one report can be filed per mission.

ACCURACY	RESULT	SUPPLIES	RESEARCH	CAMARADERIE
95% or more	Excellent	15	15	+6
85% or more	Standard	10	10	+4
70% or more	Rough	5	5	+2
Under 70%	Rejected	Retry free		

Camaraderie goes to each Recon, Assault and Security team on the mission. Exploration teams earn none.

CARTER'S TECHNO-BABBLE

An optional challenge in the Science Lab. While Colonel Carter is on station, each research project has a small ASK CARTER button on its title line. She gives four explanations of the project and only one is real science. Pick the real one.

- **Right answer.** The project gets a flat research bonus, paid when it completes: 25, 50, 75, 100 or 125 research points for project tiers 1 to 5. One-off projects such as Armory items count as tier 3.
- **Wrong answer.** The project is delayed by 10% of its total time, rounded up to 30 seconds.
- Each project can be asked about once. There are 40 questions in five groups (reactor, dialing, security, MALP and armory), and the group follows the project. The cooldown is 20 missions, counted separately from Hammond's paperwork.

SECTION 17

Logs, Shortcuts and Quick Reference

LOGS

- **Mission Briefing** is the second tab of the Operations log panel, on both the Facility and Gate Room screens. When a mission ends, the base computer files a briefing with the team, world, outcome, yield, intel change, injuries and casualties, and a button that opens that mission in the mission log. The base computer also files a short note the first time something new happens, such as the first dial, the first stronghold survey or the first reactor event. A NEW count on the tab shows unread briefings.

- **Operations log** shows a running list of events. It sits under the Gate Room controls and across the bottom of the Facility screen.
- **Mission log** is in the Briefing Room. Each Exploration, Recon, Assist, Assault, Diplomacy, Rescue and MALP mission has an ID. Opening an ID shows its summary, yield and intel, a timestamped event list, and each team's stats at launch and return. The log keeps the latest 150 missions.
- **Staff chatter.** Now and then the Operations log carries a short remark from General Hammond, Colonel Carter, Dr. Lee (once hired) or Dr. Jackson (once hired). They are flavor only and never appear during a timed minigame.
- **Address readouts.** The first dial to each world prints an address readout. Dialing the same world five times in a row draws a remark from Colonel Carter, and the first dial to a system after it is secured notes that its addresses are now in the permanent record.

QUICK REFERENCE

ITEM	VALUE
Starting supplies / power / research	60 / 80 / 0
Starting teams	Two Exploration teams, one MALP
Power cap and base regeneration	120 / 12 per minute
Power per light year of dialing	8 (auto-dial +5, failed lock 2)
Wormhole time limit	5 minutes
Incoming activations	First after 20 minutes, then every 20 to 30 minutes
Mission duration	2:00 (Exploration, Recon, Assault, Assist, Rescue)
Diplomacy duration	5:00
Treaty raid check / alert window	Every 15:00 / 2:00
Ambush delay on a non-overdue return	1 to 3 minutes
Ambush injury chance	50% before camaraderie and armor
Overdue chance	1 in 25 ambushes from Level 2 on
Overdue flag	3:30 after the scheduled return (stuck teams only)
Overdue self-return	15 minutes from the flag
Recall time	1:00 (COMM 2 recall returns 80% of the yield)
Power events	After 11 to 15 wormhole activations
Drone recon cooldown	5 minutes
Hammond's paperwork cooldown	10 missions
Carter cooldown	20 missions

ITEM	VALUE
Artifacts	10 total, 2 per level, plus 7 hidden-world artifacts
Assault cooldown	20 minutes after any assault
Stronghold fee	150 at Level 1, +25% per level
Final stronghold unlock	75% of regular worlds explored, rounded down
Camaraderie cap	500
Healing time	5:00 base (2:30 with Hale, 1:15 with Hale and the device)
Replacement cost for a killed member	15 supplies
Tag	5 letters or digits, unique across teams and groups
Team limit per type	Equal to the current level (Exploration never below 2)
MALP purchase and stock	25 supplies each, up to 3 held
Vehicles per send	2
Logistics requests in transit	2
Base and outpost output interval	6:30
Base stockpile cap	1000 supplies and 500 research points
Tel'tak load from a base	400 supplies and 200 research points
Tel'tak fuel	Light years divided by 4, rounded up, in naquadah
Outpost cost	60 supplies, plus 20 for each outpost already built
Special Ops rescue	Request free; fee 10 to 30 at dispatch; travel 5:00 to 1:00 by level

This guide describes Stargate Command build 0.9.22. Figures are taken from the build's rules and may change in later builds.
